

6 POSITION 4 bank chip

TECHNICAL DATA SHEET

WHAT IT IS:

The 6 Position 4 Bank chips are designed to increase horsepower and torque. The 4 Bank Chip settings include stock, 50, 75 and 100 hp positions; all are adjustable on the fly. The 6 Position 4 Bank Chip offers two new positions, high idle, with increased RPM's for cold weather starts, and a Valet setting that returns the truck to stock and adds a 70 mph speed governor. A setting for theft control could be used in place of one of the programs if desired.

WHAT IT DOES:

Utilizing state-of-the-art programs, Bully Dog's 4-Bank Chips run the lowest EGTs in the industry, typically running 50 to 100 degrees cooler than competitor products. For an additional 50-100 horsepower, simply plug the 4-Bank Chip into the ECU. The 6 position 4 Bank Chips are all adjustable on the fly if accompanied by a flip switch. The 4-Bank Chip works on 1994-2003 7.3L Power Stroke engines. The 1994-98 Power Stroke models gain up to 65 additional horsepower, while 1999-03 models could see up to an extra 120 horsepower.

SOLUTIONS:

- Will solve lack of power situations
- Will help with sluggish shifts
- With good driving habits, it will increase MPG
- Improved Drivability

BENEFITS

•Increase Performance

These performance modules are designed to increase horsepower while keeping EGT's under control.

•Tranny Smart

For quicker, firmer shifts, the 4 Bank chips will enhance the Transmission line pressures on all trucks with automatic transmissions. This is ideal for all towing situations and enhancing transmission life.

•New 6 Position 4 Bank Chip

The new 6 position 4 Bank Chip gives additional options such as: high idle with increased RPM for cold weather starts and Valet setting which returns the truck to stock and adds a 70 mph speed governor.

•Adjustable on the Fly

All 4 Bank Chips are adjustable on the fly with the six position switch. Save time with the ease of operation by adjusting on the fly.
